## Good reasons to choose Frico

More than 85 years experience in developing products for the varied Nordic climate has provided us with a unique knowledge bank. This is our foundation when creating today's energy efficient solutions for a comfortable indoor climate.

### Leading technology and design

Today Frico is the leading supplier of air curtains, radiant heaters and fan heaters in Europe, and the products are designed according to good Scandinavian tradition. As market leaders we run development and offer both electrical and water heated products and also air curtains without heat. For our air curtains the Thermozone Technology guarantees efficient separation with minimum use of energy and a low sound level.

### Keeping our promises

Frico has access to one of Europe's most modern and advanced air and sound laboratories. It helps us to ensure that our products deliver what we promise. We regularly carry out tests and measurements during the development of new products, but also to improve existing products. The measurements are carried out according to the AMCA and ISO standards.

### Frico Academy

Frico Academy is an important platform for networking and sharing inspiration and knowledge between us and our distributors around the world. Through the Frico Academy we share our knowledge on theory and technology, as well as product knowledge and experience in manufacturing and product development.

### Frico saves energy

Thanks to our broad product range and our many years of experience, Frico is able to help you save energy. By offering total solutions, including both complete heating systems and products for additional heating, we can generate a comfortable indoor climate at a low energy cost. Our regulation systems for different levels ensure that you never use more energy than is required. Through our parent company, Systemair, we also possess knowledge about ventilation and can provide appropriate solutions.

### Climate-smart

At Frico, we are proud to be able to offer energy-efficient products for a better indoor climate. In our product development work, the focus is on achieving the greatest possible function with the least possible energy consumption – without compromising on our core values of trust, competence and care.

This means that our products not only manage the local climate in business complexes, industrial buildings, offices or summer cottages; with optimum energy efficiency, we ensure that our products are climate-smart.

## Ecodesign Regulation

Ecodesign Regulation (EU) 2015/1188 concerning local space heaters does not apply to all application areas. The Regulation applies when an installation is intended to provide thermal comfort for people in the premises. The Regulation does not apply to heating installations of a more technical nature e.g. in engineering/utility rooms, in production processes, frost protection, etc. The Regulation also does not apply to installations in vehicles, offshore or outdoors.

Many of Frico's products can be used as both local space heaters (as defined in (EU) 2015/1188) and for technical heating purposes. It is up to the installer responsible for the installation to assess whether the Ecodesign Regulation is applicable or not. Control solutions for installations not covered by the Ecodesign Regulation are listed in a separate table.

## Energy efficient products for a comfortable indoor climate

### Air curtains

It makes sound economic sense to create an efficient and invisible door that keeps the heat inside. Air curtains can be even more effective when used in air conditioned or cold storage buildings.

Thermozone technology with its precisely adjusted air velocity gives even protection throughout the opening. Frico air curtains provide the most efficient separation with the lowest possible energy consumption, regardless of whether it is the heat or the cold that you want to keep inside.

The air curtain units should be positioned as close to the door opening as possible and cover its whole width. The recommended installation height given for our air curtains varies depending on the relevant premises.

### Radiant heaters

Frico radiant heaters imitate the sun, the most comfortable and efficient heat source available. The heat is emitted only when the rays hit a surface and the room temperature can thus be lowered while occupants experience a comfortable environment. This makes radiant heaters well suited not only for total heating but also for zone and spot heating, for example to avoid cold draughts from windows.

Radiant heaters are easy to install and require minimum maintenance. They heat directly when switched on and give no air movement.

### Fan heaters

We are proud of the worldwide fame Frico fan heaters have gained. They are reliable and are designed for long life. Our range covers all needs. The investment cost is low compared to other heating systems.

Frico fan heaters are compact, silent and light weight. They are available for electrical heating as well as for water heating.

### Ceiling fans

Ceiling fans force over-heated air from the ceiling down to the occupation zone in premises with high ceilings so that the heat is maximally exploited. The ceiling fans can also be run in reverse, so that cold air can circulate through the room giving it a cooler feel.

### Convector

Convection is the term for the rotating air movement where the air is affected by a heat source. The air is heated - rises upwards - cools and comes back to then be reheated. This gives good comfort through good heat distribution and the warm air flow directed upwards can be used to counteract cold drafts from large glass surfaces.

### Thermostats and controls

The key to energy efficient heating and good comfort is the combination of heating products and good controls. Frico offers a wide range of thermostats and controls, read more under each product or in the Frico Catalogues.

The product selection guide at [www.frico.net](http://www.frico.net) helps you to find the right product and to easily collate all technical data, accessories and heating calculations to your documents.

# Controls Pamir 4200/Pamir 5000

## FC Direct

### Entry level

- Door contact
- Calendar function
- Filter timer
- Built-in temperature sensor

## FC Smart

### FC Direct +

- Control via app (Bluetooth)
- Wireless sensors possible
- Enhanced water control possible
- Adjustable calendar function
- Away and Boost function
- Adjustable filter timer
- Vestibule function
- Zone possibility

## FC Pro

### FC Direct + FC Smart +

- Automatic air flow control
- Automatic heat blocking

## FC Building - BMS

### FC Direct +

- 0-10V, potential free contact or Modbus
  - Automatic air flow control\*
  - Automatic heat blocking\*
  - Enhanced water control possible
  - Heat and fan settings
  - Alarm indication
  - Read values
- \* Requires outdoor temp signal

# FC Control System

One system, numerous possibilities

Frico air curtains come with an integrated PC-board and are supplemented with the intelligent control system FC of your choice, working together to create many smart and energy saving features. There are four different packages to choose from, depending on your requirements, and extra components can be added to expand and customize the system. Please contact us to assemble a package suited to your specific needs.

## FC Direct

*Entry level*

- Door contact
- Calendar function
- Filter timer
- Built-in temperature sensor

## FC Smart

*FC Direct +*

- Control via app (Bluetooth)
- Wireless sensors possible
- Enhanced water control possible
- Adjustable calendar function
- Away and Boost function
- Adjustable filter timer
- Vestibule function
- Zone possibility

## FC Pro

*FC Direct + FC Smart +*

- Automatic air flow control
- Automatic heat blocking

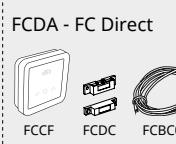

## FC Building - BMS

*FC Direct +*

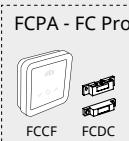

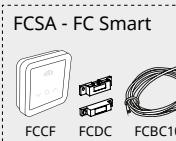

- 0-10V, potential free contact or Modbus
- Automatic air flow control\*
- Automatic heat blocking\*
- Enhanced water control possible
- Heat and fan settings
- Alarm indication
- Read values

### Accessories FC Control

Art.nr	Type	Description
74684	<b>FCDA</b>	Extra FC Direct for creating zones
74699	<b>FCLAP</b>	Local access point for extra wireless sensors or app control (Bluetooth), incl. 10 m communication cable, FC, IP44
74694	<b>FCRTX</b>	External room temperature sensor, incl. 10 m sensor cable, FC, IP20
74695	<b>FCOTX</b>	Outdoor temperature sensor, incl. 10 m sensor cable, IP44
74703	<b>FCTXRF</b>	Wireless indoor/outdoor temperature sensor, FC, IP44
17495	<b>FCDC</b>	Door contact
74718	<b>FCBC05</b>	Extra communication cable, FC, 5 m
74719	<b>FCBC10</b>	Extra communication cable, FC, 10 m
74720	<b>FCBC25</b>	Extra communication cable, FC, 25 m
74721	<b>FCSC10</b>	Extra sensor cable, FC, 10 m
74722	<b>FCSC25</b>	Extra sensor cable, FC, 25 m
74702	<b>FCWTA</b>	Return water temperature sensor, FC

# Technical data

Enclosure classes for electrical materials

## IP, first figure Protection against solid objects

0	No protection
1	Protection against solid objects ≥ 50 mm
2	Protection against solid objects ≥ 12,5 mm
3	Protection against solid objects ≥ 2,5 mm
4	Protection against solid objects ≥ 1,0 mm
5	Protection against dust
6	Dust-tight

## IP, second figure

## Protection against water

0	No protection
1	Protection against vertically dripping water
2	Protection against dripping water max 15°
3	Protection against sprinkled water
4	Protection against spraying with water
5	Protection against water jets
6	Protection against heavy seas
7	Protection against short immersion in water
8	Protection against the effects of long-term immersion in water

## How is sound measured?

Sound level is measured in decibel (dB). The dB is a logarithmic unit used to describe a ratio. If the sound level is increased by 10 dB, the result is twice as loud (mathematically it is 6 dB, but the way we hear it, it is 10 dB).

It is also useful to know that two equally strong sound sources give an added sound level of 3 dB. Assume you have two entrances with two air curtains in each entrance, all four units with a sound level of 50 dB. The total sound level will then be 56 dB. The first opening will have a total sound level of 53 dB plus an extra 3 dB from the other opening.

## Points of reference - dB

0	The softest sound a person can hear
10	Normal breathing
30	Recommended max. level for bedrooms
40	Quiet office, library
50	Large office
60	Normal conversation
80	Ringing telephone
85	Noisy restaurant
110	Shouting in ear
120	The threshold of pain

Sound pressure: Our sound measurements are carried out according to the international standards BS 848, AMCA 210-85 and DIN 24 163. The distance to the product is 5 m, directivity factor 2 and the equivalent absorption area is 200 m<sup>2</sup>, unless otherwise stated.

Sound power: Measurements according to ISO 27327-2: 2014, Installation type E.

Heat insulation, U-value

U = thermal transmittance value [W/m<sup>2</sup> °C]

U-values indicate the heat insulating capacity of a building section.
